

ABSTRACT OF THE DISCLOSURE

A composite cut-resistant yarn is provided that has no high-performance fibers present and has wire only in the core, yet is comparable in cut-resistance characteristics, the yarn containing a core of at least one fiberglass strand and at least one wire strand, either parallel or twisted about one another, and at least one cover strand made from non-metallic non-high performance fiber, along with fabric made therefrom, and protective articles and garments made from the fabric.
